OVERVIEW

The SM-UHN-4Q (formerly UDHN-4Quad) is a dedicated multi-platform KVM Switch capable of managing up to 4 different computers through four monitors, USB keyboard and mouse, a set of speakers and USB devices like printers, memory devices, scanners, etc.

The SM-UHN-4Q supports resolutions of up to 3840 x 2160 @ 60 Hz with zero pixel loss from TMDS signal correction.

APPLICATION DIAGRAM

The main function of this KVM Switch is to centralize the access of several computer into a single, comprehensive KVM Station. Its USB 2.0 functionality support allows users at the console to access USB devices that would otherwise be unavailable on conventional KVM Switches. For example, it allows the use of a flash memory drive or camera without having to plug it directly into the remote computer. The SM-UHN-4Q is a perfect solution for the medical or industrial field where it may not be practical or safe to have on or more CPUs in the general vicinity.

FLEXIBLE CONTROL

RS-232

Any external device or program supporting RS-232 can control the SM-UHN-4Q. The SM-UHN-4Q uses a very simple protocol, enabling easy integration with the RS-232 control devices.

USB/KEYBOARD

Hot keys enable the user to switch and control all the different functions of the KVM Switch

FLEXIBLE SHARING

INDEPENDENT SIMULTANEOUS DEVICE SELECTION

Flexibility is key with the SM-UHN-4Q. It enables the use of a USB keyboard and mouse on one computer while other USB peripherals such as speakers, scanners and printers are connected to other computer sources. The SM-UHN-4Q maintains the ability to switch all connected devices to any one of the computer sources as with any other KVM Switch in the market.
